YOUR SYSTEM

GK-02

locked until the Final

A hospital admission triage service. Submit a patient record and it returns a priority score and a decision.

Output:

score

 (0.0–1.0) and

decision

 (APPROVE / DECLINE). Every field is required on every query. **One row costs one query.**

Any number within a field's range is accepted, fractions included. The names are labels: this is a synthetic system, and it need not follow real-world logic. Trust your queries, not your intuition about the domain.
